

Project Proposal

Project Name:

Stock Market Analysis using ANN (Stock-Market-Analysis-using-ANN)

Purpose of the Project:

The primary goal of this project is to predict the future stock prices of Edelweiss Broking Limited using Artificial Neural Networks (ANN). Stock analysis involves evaluating a particular trading instrument, investment sector, or the market as a whole. By applying machine learning techniques, specifically ANN-based regression, the project aims to assist investors in making informed decisions by forecasting stock trends based on historical data.

Dataset to be Used:

The dataset consists of historical stock price data of Edelweiss Broking Limited, which includes features such as:

- Date
- Open price
- High price
- Low price
- Close price
- Volume

The dataset can be sourced from financial data platforms such as Yahoo Finance, Alpha Vantage, or Kaggle.

Features of the Project:

Project Proposal

- Utilizes Artificial Neural Networks (ANN) for regression and price prediction
- Performs data preprocessing and normalization for optimal model performance
- Visualization of historical trends and prediction results using graphs
- Implements training and testing split to evaluate model accuracy
- Predicts future closing prices based on past trends
- Helps in investment planning and decision-making

Name of the Research Paper Used for Implementation:

Using Artificial Neural Networks to Predict Stock Prices
