Professional Profile

As a backend developer, my goal is to design and build scalable, efficient, and secure systems that support seamless user experiences and business growth. I strive to create robust APIs, optimize database structures, and enhance system performance to ensure reliability and maintainability. I'm passionate about solving complex problems, improving backend architecture, and contributing to cross-functional teams to deliver high-impact solutions. My continuous focus is on staying aligned with modern development practices, improving system scalability, and delivering backend solutions that drive long-term success.

Skills

- **Programming Languages:** JavaScript, HTML, CSS, Node.js, Express.js, MongoDB, Playwright, Puppeteer, Git, GitHub, REST APIs, JWT Auth, Postman, Agile Development, Server Side Programming · Server Programming · Back-end Operations
- **Programming & Web Development:** Proficient in JavaScript, Node.js, Express.js, and REST APIs with hands-on experience in backend automation and MERN stack fundamentals (PostgreSQL exposure)
- **Tools & Frameworks:** Experienced with Playwright, Puppeteer, Git, GitHub, Agile methodologies; familiar with AI assisted development tools and eager to learn platforms like Cursor AI
- **Problem Solving & Optimization:** Strong troubleshooting skills with a focus on debugging, performance tuning, and scalable API design

Work Experience

Beladed –Backend Developer, USA · Remote

Aug 2024 – Present

Nodejs developer

- Developed backend with automation tools using Puppeteer and Playwright to optimize tasks across multiple digital platforms.
- Created and maintained RESTful APIs for managing features like livestreams, direct messaging, profiles, comments, and search functionalities.
- Automated workflows for platforms including YouTube, Facebook, Dailymotion, Vimeo, and TikTok, focusing on livestream setup and user interaction.

- Ensured backend systems were scalable, efficient, and capable of handling real-time data processing.
- Collaborated with cross-functional teams to integrate backend automation with frontend and product systems.
- Participated in Agile ceremonies, including sprint planning, daily stand-ups, and retrospectives.
- Troubleshoot and debugged automation scripts to ensure high performance and system reliability.

Education

UNIVERSITY OF LAHORE

Expected Graduation: [2021-2025]

Bachelor of Science in Computer Science

Current CGPA: 3.35

Relevant Coursework: Object Oriented Programming, Database Management System, Data Structures and Algorithms, Operating Systems.

Projects:

- **Beladed:** At Beladed, I strive to deliver a more interactive and engaging media experience. As a backend developer, I design and maintain the core systems that power real-time features. I work closely with the team to build scalable and reliable solutions that ensure consistent, smooth performance. My main focus is providing a stable and efficient platform that enables seamless user interactions. I created and maintained RESTful APIs for managing features like livestreams, direct messaging, profiles, comments, and search functionalities. I automated workflows for platforms including YouTube, Facebook, Dailymotion, Vimeo, and TikTok, focusing on livestream setup and user interaction.
- **Final Year Project Evaluation System (2024):** It is designed to help manage and track the evaluation process of student projects (FYPs) at a university. It allows **evaluators** to review and grade students' projects, providing feedback and scores. The system enables **admins** to assign evaluators to projects and ensures that all evaluations are done on time. It helps keep track of each project's progress and ensures that evaluations are organized, transparent, and easy to manage. The system also supports **supervisor involvement** and ensures that all stakeholders are kept updated throughout the process.
