

Title of Final Project

Project ID: Fall-2020-00

Session: BSCS Fall 2017 to 2020

Project Advisor: Name of Project Adviser

Submitted By

Name of Student	ID of Student
Name of Student	ID of Student
Name of Student	ID of Student

Department of Computer Science & IT
The University of Lahore
Lahore, Pakistan

Declaration

We have read the project guidelines and we understand the meaning of academic dishonesty, in particular plagiarism and collusion. We hereby declare that the work we submitted for our final year project, entitled **Write your project name here** is original work and has not been printed, published or submitted before as final year project, research work, publication or any other documentation.

Statement of Submission

This is to certify that **Name of Student** Roll No. **Roll no of Student**, **Name of Student** Roll No. **Roll no of Student** and **Name of Student** Roll No. **Roll no of Student** have successfully submitted the final project named as: **Title of the Final Project**, at Computer Science & IT Department, The University of Lahore, Lahore Pakistan, to fulfill the partial requirement of the degree of **BS in Computer Science**.

Supervisor Name:

Signature:

Date:

Dedication

This project is dedicated to my father, who taught me that the best kind of knowledge to have is that which is learned for its own sake. It is also dedicated to my mother, who taught me that even the largest task can be accomplished if it is done one step at a time.

Acknowledgement

We truly acknowledge the cooperation and help make by Name of **Acknowledger**, **Designation of Address of Organization**. He has been a constant source of guidance throughout the course of this project. We would also like to thank **Acknowledger** from **Designation, Address of Organization** for his help and guidance throughout this project. We are also thankful to our friends and families whose silent support led us to complete our project.

Date:

Jan 1, 2020

Abstract

An **abstract** is a brief summary of your project. Please focus on the following points to write abstract of you project.

Introduction. This is where you describe the purpose for doing your **project** or invention.

Problem Statement. Identify the problem you solved or the hypothesis you investigated.

Procedures. ...

Results. ...

Conclusions.

Area of the Project

Please write the project area here e.g. Machine Learning, Image Processing, Android Application, Game Application, Web Application, Natural Language Processing, Cloud Computing, Robotics, Artificial Intelligence etc. You can use multiple areas.

Technologies used

Please write all the technologies used in your project e.g. HTML, CSS, JavaScript, .NET, Php, Xampp, MySQL etc.

Table of Content

Chapter 1: Introduction to the Problem

- **Introduction**

The Problem introduction gives an explanation about the issue that is being addressed by the project. It also argues in favor of implementing the project in the proposed area in the existing conditions.

- **Purpose**

Define the purpose why you are developing your project what is the need and how this system or project will help in the market or in life of the society

- **Objective**

Define your objectives what you want to achieve after the completion of the project

- **Existing Solution**

Explain the existing solution in the market what are the flows/problems with that existing solutions.

- **Proposed Solution**

Explain what you have proposed and how you tackle the problem in the existing products which are related to your project last but not the least why your product is better than the existing solution in the market

Chapter 2: Software Requirement Specification

- **Introduction**

- **Purpose**

This subsection should

- Delineate the purpose of the SRS
- Specify the intended audience for the SRS.

- **Scope**

This subsection should

- Identify the software product(s) to be produced by name
- Explain what the software product(s) will, and, if necessary, will not do
- Describe the application of the software being specified, including relevant benefits, objectives, and goals
- Be consistent with similar statements in higher-level specifications the system requirements specifications, if they exist.

- **Definitions, acronyms, and abbreviations**

This subsection should provide the definitions of all terms, acronyms, and abbreviations required to properly interpret the SRS. This information may be provided by reference to one or more appendixes in the SRS or by reference to other documents.

So here what are definitions, acronyms, and abbreviations

Definitions: a statement of the exact meaning of some words which are used in the document.

Acronyms: name formed as an abbreviation from the initial components in a phrase or a word like NATO - The North Atlantic Treaty Organization. **Abbreviations:** a shortened form of a word or phrase like UOL is the abbreviation of The University of Lahore

- **Overall description**

- **Product perspective**

This subsection of the SRS should put the product into perspective with other related products. If the product is independent and totally self-contained, it should be so stated here.

A block diagram showing the major components of the system, interconnections, and external inter-faces can be helpful.

This subsection is sub-divided into the following

- **System interfaces** (functionality of the software to the system requirement)
- **User interfaces** (define the layout of the user end including the screenshots)
- **Hardware interfaces** (define the software dependencies if any)
- **Software interfaces** (define the hardware dependencies if any)

- **Communications interfaces** (This should specify the various interfaces to communications such as local network protocols etc.)
 - **Memory** (This should specify any applicable characteristics and limits on primary and secondary memory.)
 - **Operations** (specify the normal and special operations like backup and recovery etc.)
 - **Site adaptation requirements.** (Define the requirements for any data or initialization sequences that are specific to a given site, mission, or operational mode)
- **Product functions**
Product functions include the functional requirement of your project

Now what is the functional requirements suppose you have a module of Account Registration in your project then the functional requirement for this module are Create Account, View Account, Delete Account, Update Account, Login Account, Logout Account etc. and many more according to the situation you are in.

The following things include in each of the functional requirement of your project

- ID
- Name
- Description
- Input
- Output
- Basic Work Flow
- Requirements (optional)

For example, yours create account functional requirement look like this and you have to follow this template for writing your functional requirements

ID:	FR_01			
Name:	Create Account			
Description	Input	Output	Requirements	Basic Work Flow
Enter details to create account	Name, Email, Password etc.	Account created	Internet Connectivity required	Enter correct information and click submit button System save the record in database

Table 1 Functional Requirement Create Account

- **User characteristics**

This subsection of the SRS should describe those general characteristics of the intended users of the product including educational level, experience, and technical expertise.

- **Constraints**

This subsection of the SRS should provide a general description of any other items that will limit the developer's options. These include

- Regulatory policies
- Hardware limitations
- Interfaces to other applications
- Parallel operation
- Audit functions
- Control functions
- Higher-order language requirements;
- Signal handshake protocols
- Reliability requirements
- Criticality of the application
- Safety and security considerations

- **Assumptions and dependencies**

This subsection of the SRS should list each of the factors that affect the requirements stated in the SRS. These factors are not design constraints on the software but are, rather, any changes to them that can affect the requirements in the SRS.

- **Apportioning of requirements**

This subsection of the SRS should identify requirements that may be delayed until future versions of the system.

- **Specific requirements**

This section will describe the functional and non-functional requirements of System at a sufficient level of detail for the designers to design a system satisfying the User requirements and testes to verify that the system satisfies the requirements.

- **Functional Requirement**

In this section only describe the function/modules of your project.

- **Non-functional Requirements**

This sub-section includes the following

- Usability
- Reliability

- Performance
- Design Constraints
- Portability
- Maintainability
- License Agreement

Chapter 3: Use Case Analysis

This chapter includes all the use case diagrams of the functional requirements of your project along with the aggregated usecase diagram

The Usecase diagrams can be made by using Visual Paradigm

- Select Diagram > New from the application toolbar.
- In the New Diagram window, select Use Case Diagram.
- Click Next.
- Enter the diagram name and description.
- Click OK.

The following things include in each of the functional requirement of your project

- Usecase ID
- Usecase Name
- Description
- Primary Actor
- Secondary Actor
- Pre-Condition
- Post-Condition
- Basic Flow
- Alternate Flow

For example, yours create account use case look like this and you have to follow this template for writing your use cases

Usecase diagram for create account

Figure 1 Usecase Diagram Create Account

Usecase diagram detail

Use Case ID	UC_01 (all ID should be in this sequence)	
Use Case Name	Create Account (Name of usecase here is create account)	
Description	Detail of this usecase	
Primary Actor	Actors associate with the usecase	
Secondary Actor		
Pre-Condition	What is required to do this function	
Post-Condition	What is the output of this function	
Basic Flow	Actor Action	System Action
	Flow of information	What would system do according to the information
Alternate Flow	Another way to work with this function	

Table 2 Usecase Create Account

Chapter 4: Design

In this section, we provide the design analysis of our modules including the following designs

- Architecture Diagram
- ERD with data dictionary
- Data Flow diagram
- Class Diagram
- Activity Diagram
- Sequence Diagram
- Collaboration Diagram
- State Transition Diagram
- Component Diagram
- Deployment Diagram

- **Architecture Diagram**

Define the graphical representation of the concepts, their principles, elements and components that are part of your project.

Figure 2 Architecture Diagram

- **ERD with data dictionary**

Entity Relationship Diagram with complete relations with dependencies of your project

Figure 3 ERD

- **Data Flow diagram**

Data flow diagram includes two levels

- **The level 0**

The flow of information inside the system is defined in this level

[cont]

Figure 4 Level 0 DFD

- **The level 1**

The flow of information outside the system is defined
in this level

Figure 5 Level 1 DFD

- **Class Diagram**

Describe the structure of a project by showing the systems classes, their attributes, operations (or methods), and the relationships among objects.

Sample Class Diagram

Figure 6 Class Diagram

- **Activity Diagram**

This diagram includes all the activity diagrams of the functional requirements of your project along with the aggregated activity diagram

The Activity diagrams can be made by using Visual Paradigm

- Select **Diagram > New** from the application toolbar.
- In the **New Diagram** window, select **Activity Diagram**.
- Click **Next**.
- Enter the diagram name and description.
- Click **OK**.

For example, yours create account activity look like this and you have to follow this template for writing your activity diagrams

Activity diagram for create account

Figure 7 Activity Diagram Create Account

• Sequence Diagram

This diagram includes all the Sequence diagrams of the functional requirements of your project along with the aggregated Sequence diagram

The Sequence diagrams can be made by using Visual Paradigm

- Select **Diagram > New** from the application toolbar.
- In the **New Diagram** window, select **Sequence Diagram**.
- Click **Next**.
- Enter the diagram name and description.
- Click **OK**.

For example, yours create account Sequence look like this and you have to follow this template for writing your Sequence diagrams

Sequence diagram for create account

Figure 8 Sequence Diagram Create Account

- **Collaboration Diagram**

It shows the object organization as shown below. Here in collaboration diagram the method call sequence is indicated by some numbering technique as shown below. The number indicates how the methods are called one after another. We have taken the same order management system to describe the collaboration diagram.

Collaboration diagram of an order management system

Figure 9 Collaboration Diagram

- **State Transition Diagram**

State Transition diagram is used to describe the states of different objects in its life cycle. So, the emphasis is given on the state changes upon some internal or external events. These states of objects are important to analyze and implement them accurately

Figure 10 State Transition Diagram

- **Component Diagram**

Component diagrams are used to describe the physical artifacts of a system. This artifact includes files, executables, libraries etc.

So, the purpose of this diagram is different, Component diagrams are used during the implementation phase of an application. But it is prepared well in advance to visualize the implementation details.

Figure 11 Component Diagram

- **Deployment Diagram**

Deployment diagram represents the deployment view of a system. It is related to the component diagram. Because the components are deployed using the deployment diagrams. A deployment diagram consists of nodes. Nodes are nothing but physical hardware's used to deploy the application.

Deployment diagrams are useful for system engineers. An efficient deployment diagram is very important because it controls the following parameters

- Performance
- Scalability
- Maintainability
- Portability

Deployment diagram of an order management sy

Figure 12 Deployment Diagram

Chapter 5: User Manual

(Instruction for creating user manual:

You can create a prototype using software like Figma to bring your ideas to life)

User manual is an important part of an application documentation. It is a guide for users on operations within the application. In this section of the document the students are required to provide detailed guide on how to use features of the application developed so far. The chapter must include screenshots of the frontend developed so far showing flow of the working of the application. An empty chapter will indicate

that the students have not developed anything so far, which will lead to deduction of marks.

Let take the login function as an example

This is the login authentication screen from where the user can log in to the system. User must have

- Active username and password.
- Web login address.

Steps:

- Open login webpage
- Enter login details.
- Click Login.
- Done.

References

The references shall be quoted in the following format as provided by IEEE:

Reference examples

There are standard reference formats for most types of document. Below are examples of the most common types of document you might want to reference. Each of the following gives a suggested standard format for the reference followed by examples for the different document types.

Book

[Ref number] Author's initials. Author's Surname, Book Title, edition (if not first). Place of publication: Publisher, Year.

- I.A. Glover and P.M. Grant, Digital Communications, 3rd ed. Harlow: Prentice Hall, 2009.

Book chapter

[Ref number] Author's initials. Author's Surname, "Title of chapter in book," in Book Title, edition (if not first), Editor's initials. Editor's Surname, Ed. Place of publication: Publisher, Year, page numbers.

- C. W. Li and G. J. Wang, "MEMS manufacturing techniques for tissue scaffolding devices," in Mems for Biomedical Applications, S. Bhansali and A. Vasudev, Eds. Cambridge: Woodhead, 2012, pp. 192-217.

Electronic Book

[Ref number] Author's initials. Author's Surname. (Year, Month Day). Book Title (edition) [Type of medium]. Available: URL

- W. Zeng, H. Yu, C. Lin. (2013, Dec 19). Multimedia Security Technologies for Digital Rights Management [Online]. Available: <http://goo.gl/xQ6doi>

Note: If the e-book is a direct equivalent of a print book e.g. in PDF format, you can reference it as a normal print book.

Journal article

[Ref number] Author's initials. Author's Surname, "Title of article," Title of journal abbreviated in Italics, vol. number, issue number, page numbers, Abbreviated Month Year.

- F. Yan, Y. Gu, Y. Wang, C. M. Wang, X. Y. Hu, H. X. Peng, et al., "Study on the interaction mechanism between laser and rock during perforation," Optics and Laser Technology, vol. 54, pp. 303-308, Dec

2013.

Note: the above example article is from a journal which does not use issue numbers, so they are not included in the reference.

E-Journal article

PDF versions of journal articles are direct copies of the print edition, so you can cite them as print journals.

[Ref number] Author's initials. Author's Surname. (Year, Month). "Title of article." Journal Title [type of medium]. volume number, issue number, page numbers if given. Available: URL

- M. Semilof. (1996, July). "Driving commerce to the web-corporate intranets and the internet: lines blur". Com

Conference papers

[Ref number] Author's initials. Author's Surname, "Title of paper," in Name of Conference, Location, Year, pp. xxx.

- S. Adachi, T. Horio, T. Suzuki. "Intense vacuum-ultraviolet single-order harmonic pulse by a deep-ultraviolet driving laser," in Conf. Lasers and Electro-Optics, San Jose, CA, 2012, pp.2118-2120.

Theses/Dissertations

[Ref number] Author's initials. Author's Surname, "Title of thesis," Designation type, Abbrev. Dept., Abbrev. Univ., City of Univ., State, Year.

- J. O. Williams, "Narrow-band analyser," Ph.D. dissertation, Dept. Elect. Eng., Harvard Univ., Cambridge, MA, 1993

Online Documents

If you are using documents such as a report, conference paper, standard, patent or thesis online and it also exists as an identical print equivalent i.e. with the same format and pagination, it can be usually be referenced as the print version.

If it is e-only, you can make the standard reference template an electronic version by adding the material type in square brackets e.g. [Online] after the document title. If there is no specific document title you can place this after the document number (e.g. patent number).

At the end of the reference add: Available: URL. See below for an example of an online patent:

- M.R. Brooks, "Musical toothbrush with adjustable neck and mirror," U.S Patent 326189 [Online], May 19 1992. Available: <http://goo.gl/VU1WEk>

Websites

Note: Include as much of the key information as you can find for a given website. If a web page has no personal author, you can use a corporate author. Failing that, you can use either Anon. (for anonymous) or it is permissible to use the title of the site.

[Ref number] Author's initials. Authors Surname. (Year, Month. Day). Title of web page [Online]. Available: URL

- BBC News. (2013, Nov. 11). Microwave signals turned into electrical power [Online]. Available: <http://www.bbc.co.uk/news/technology-24897584>
- M. Holland. (2002). Guide to citing internet sources [Online]. Available: http://www.bournemouth.ac.uk/library/using/guide_to_citing_inter

How to cite the references:

In order to cite the references in the text the reference numbers are to be placed in square brackets and interlaced in the text. For example, A comprehensive detail of how to prevent accidents and losses caused by technology can be found in the literature [1].

A project report / thesis cannot be accepted without proper references.

Appendix

- A section at the end of a document that includes information that is too detailed for the text of the document itself and would "burden the reader" or be "distracting," or "inappropriate" (APA, 2010, p. 38-9).
- The content in the appendices should be "easily presented in print format" (APA, 2010, p. 39).
 - Examples:
 - lists of length (short lists belong in the document itself)
 - detailed descriptions (essential details should be in the document itself)
 - a list of articles that support data but are not referred to in the document itself
 - demographic details for subpopulations studied by the document

Appendix A

List of Counties in Wisconsin that Have More Than 1

First Paragraph
– no indent,
flush left

All 72 counties in Wisconsin have documented wetland ac more than 130,000 acres of wetland. These counties include Marathon, Marinette, Oconto, Oneida, Price, Sawyer, and of Natural Resources, 2012).

Following paragraphs
– indented,
formatted normally

Marathon County, in particular has high number of proximity to farm land and grazing areas. It is of vital importance agricultural use of the land in addition to maintaining the land must manage both types of acreage with the other in mind riparian areas.

Riparian areas are...
